Skills JavaScript, TypeScript, React, Redux, Ruby, Rails, Node, Express, Next, HTML, CSS, jQuery, Mongoose, MongoDB, MySQL, PostgreSQL, SQLite3, AWS S3, Google Cloud, RSpec, Webpack, NPM, Git, Heroku,

Work Experience

Upstart

February 2022 - February 2023

Software Engineer

- Skillfully implemented software changes in both the back-end (Ruby on Rails) and front-end (React) using Object-Oriented Paradigms adhering to specified requirements provided by the product team.
- Meticulously practiced Test-Driven Development (TDD) principles, authoring comprehensive unit tests (using RSpec and Jest) and integration tests (with Selenium), ensuring robust functionality and high code coverage level.
- Handled production support and on-call responsibilities with PagerDuty, analyzed site health metrics using Datadog /SumoLogic. Proficient in error logging through BugSnag and effectively leveraging it for troubleshooting and issue resolution.
- Contributed to significant initiatives led by senior engineers by developing critical components that were vital to the overall project and demonstrated a deep understanding of the technical design and effectively translated the requirements outlined in each relevant ticket into actionable solutions.
- Managed smaller initiatives, collaborating closely with the product team to comprehend project requirements and created comprehensive technical designs, implementing streamlined processes to drive the successful completion of these projects.
- Experienced in executing builds using a container engine like Docker and a continuous integration/continuous deployment (CI/CD) engine such as Jenkins) to streamline the build and deployment processes for efficient software development workflows.
- Proficient in troubleshooting and resolving production issues by utilizing Kubernetes to manage and debug running pods, identifying and resolving issues related to containerized environments, and ensuring smooth operation and optimal performance in production systems.

Fight Culture SF

February 2021 - February 2022

Software Engineer

- Managed the front-end team, conducted regular standup discussions regarding front-end innovations and UX/UI design approaches
- Utilized React to construct front-end modules, create secure authorization forms, and implement role-based access controls. Employed various libraries, including React-Router, to ensure the proper implementation of authentication routes.
- Actively collaborated on the design of the back-end system, employing Node.js and Object-Oriented Programming principles to structure data organization in a MongoDB database. Developed RESTful routes to facilitate efficient communication within the system

Fragomen LLP

Assistant Paralegal

December 2019 - March 2020

- Collaborated with attorneys to assist in immigrant visa petitions and applications
- Updated forms, petitions, and other data in a case management database of over 100,000 clients
- Drafted government forms and letters following processing and procedural requirements

Education

App Academy - Immersive software development course with focus on full stack web development

2021

San Francisco State University - Bachelor's of Arts in Philosophy

2019
